## MACHINE LEARNING

and independent Variable?

A) Regression B) Correlation

In Q1 to Q11, only one option is correct, choose the correct option:
1. Which of the following methods do we use to find the best fit line for data in Linear Regression?
A) Least Square Error B) Maximum Likelihood
C) Logarithmic Loss D) Both A and B
Answer: A) Least Square Error
2. Which of the following statement is true about outliers in linear regression?
A) Linear regression is sensitive to outliers B) linear regression is not sensitive to outliers
B) Can't say D) none of these Answer: A) Linear regression is sensitive to outliers 3. A line falls from left to right if a slope is?
A) Positive B) Negative
B) Zero D) Undefined Answer:B) negative
4. Which of the following will have symmetric relation between dependent variable

	Answe	Answer: B) Correlation		
5.	Which	of the following is the reason for over fitting condition?		
	A)	High bias and high variance B) Low bias and low variance		
	,	Low bias and high variance D) none of these er: B) Low bias and high variance		
6.	A) B)	out involves label then that model is called as:  Descriptive model B) Predictive modal  Reinforcement learning D) All of the above er: B) Predictive Model		
7.	A)	and Ridge regression techniques belong to?  Cross validation B) Removing outliers  SMOTE D) Regularization		
Answe	er : D) F	Regularisation		
8.	A) B)	rcome with imbalance dataset which technique can be used? Cross validation B) Regularization Kernel D) SMOTE er: D) SMOTE		
9.	The AUC Receiver Operator Characteristic (AUCROC) curve is an evaluation metric for binary			
Classi	ficatior	n problems. It uses to make graph?		
	•	TPR and FPR B) Sensitivity and precision Sensitivity and Specificity D) Recall and precision		
Answe	er: A) TF	PR and FPR		
10	. In AUC	C Receiver Operator Characteristic (AUCROC) curve for thebetter model area		

B) Both of them D) None of these

under the Curve Nshould be less.

A) True B) False

Answer: A) True

- 11. Pick the feature extraction from below:
  - A) Construction bag of words from a email
  - B) Apply PCA to project high dimensional data
  - C) Removing stop words
  - D) Forward selection

NAnswer: B) Apply PCA to project high dimensional data

In Q12, more than one options are correct, choose all the correct options:

- 12. Which of the following is true about Normal Equation used to compute the coefficient of the Linear Regression?
  - A) We don't have to choose the learning rate.
  - B) It becomes slow when number of features is very large.
  - C) We need to iterate.
  - D) It does not make use of dependent variable.

Answer: C and D

Q13 and Q15 are subjective answer type questions, Answer them briefly.

13. Explain the term regularization?

Ans: Regularization is a method that is used to calibrate machine learning models in order to minimize the adjusted loss function and prevent overfitting or underfitting.

14. Which particular algorithms are used for regularization?

Ans: There are two main types of regularization techniques Ridge Regularization and Lasso Regularization which are commonly used.

15. Explain the term error present in linear regression equation?

Ans: The term error represents the margin of error within a statistical model, it refers to the sum of the deviations within the regression line, which provides an explanation for the difference between the theoretical value of the model and the actual observed results.
